

CORTADO

The Business Class of Mobile Services

Case Study: Zulekha Hospital L.L.C.

- **Task:** Hospital staff accessing the corporate network were bound to offices or using a connection via Microsoft Terminal Services or Citrix. Faxing and printing were only possible from the office via the local network. The goal was to allow employees become independent from the hospital's local LAN network and access data located on the corporate network from all locations.
- **Solution using Cortado Corporate Server:** Transforms the smartphone into a mobile office.
- **Value:** Increased productivity as employees now working from remote workplaces have access to all information. Significant cost savings in IT administration and improved teamwork are just some of the benefits.
