

Cortado Server 9.0 Enhances Features for Secure Management of Mobile Productivity

The new version of the enterprise mobility solution addresses the growing demand for secure productivity

(BERLIN/DENVER, March 9, 2018) Cortado Mobile Solutions today announces a new version of its enterprise mobility solution, Cortado Server 9.0. The latest version comes with numerous security and productivity improvements. The solution now supports macOS as well as Windows systems and opens its productivity apps to other MDM manufacturers.

In light of the EU's new general data protection regulation (GDPR) and similar regulations around the world, the management of mobile devices plays a central role in data privacy. It is often thought that mobile devices are potential sources of danger, however they also lay the foundation for new, far more flexible and above all, cost-saving business processes. That is why it is Cortado's goal to continue to seamlessly combine productivity and security. Cortado Server 9.0 combines MDM, MAM and MCM functions to offer a range of important, customer-based requirements have been implemented, such as:

Management of macOS computers, including printing and file access

In addition to iPhones and iPads, users can now manage all macOS computers through Cortado Server. Beyond central management, this latest version also manages printer assignments and enables easy access to the company's file server via the web app – whether users are on the go or in the workplace.

Samsung Knox support and extended Android Enterprise support

With the support of Samsung Knox, Cortado offers an alternative to Android Enterprise, whose support is even better facilitated by Cortado with this release. For Android Enterprise, the work-managed device solution set for COBO scenarios (Company Owned, Business Only) is now also supported.

Enhanced features for iOS 11

iOS 11 was supported from day one, but now users can access the extended features, as the iOS app has been fully updated.

Feature enhancements for virtual data rooms

Cortado Server 9.0 further enhances Cortado's highly secure, on-premises virtual data rooms. Within these virtual data rooms, users can easily and securely share and edit files, even with external employees.

In addition to all these new features, Cortado Server 9,0 complements other MDM systems with additional productivity features. The Cortado apps can now be managed either by Cortado Server itself or by other MDM systems, such as MobileIron or AirWatch.

"We live in a dynamic market environment and don't want to place artificial barriers in the way of our customers," said Sven Huschke, CEO at Cortado Mobile Solutions. "If you want to offer your employees mobile productivity, you can do so completely with our mobility solution. Companies that already have an MDM in place, such as MobileIron or AirWatch, can leverage our file access or mobile printing solutions to significantly increase their productivity."

Cortado Mobile Solutions

Cortado Mobile Solutions GmbH is a wholly owned subsidiary of Cortado Holding AG, and is responsible for all operations relating to the enterprise mobility solution Cortado Corporate Server. The unique enterprise mobility solution offers the perfect balance between security for the organization, easy manageability for the IT department and maximum flexibility for users.

The on-premises software includes all the tools required for successful enterprise mobility; mobile device management, mobile application management and mobile content management, and can be fully integrated into the Windows backend. IT administrators continue to work with their known systems, Active Directory groups and Windows privileges, and users can access network drives, SharePoint and intranet pages directly from their mobile devices.

Cortado Mobile Solutions follows the philosophy that working natively delivers the highest levels of user acceptance. So Cortado's enterprise mobility solution fully supports native app management and instead of focusing on separate storage when it comes to file sharing, enables a direct connection to the corporate network. The result is a significant increase in productivity for mobile employees, improved collaboration among teams as well as convenient management for the IT department. Cortado's enterprise mobility solution is developed and tested at its headquarters in Berlin, Germany. Also, experts in offices in the United States, UK, Australia, Japan, and Brazil, highly qualified consultants at our Berlin location as well as a trained, worldwide network of channel partners provide presence and support to local customers throughout the world.
